PROFESSIONAL PROFILE

Product Designer and recent Computer Science graduate transitioning into AI Product Management. Combines technical understanding of system architecture with user-centered design to build AI products that deliver real-world impact. Led an AI mobile app from idea to launch, collaborated with a backend engineer, and shipped 40+ screens across three products. Seeking an Associate Product Manager role focused on AI, where strong product thinking and execution-driven mindset drive measurable user and business outcomes.

PROJECT

PlateLensAI - AI-Powered Visual Nutrition Feedback App for Nigerian Students

Jul 2025 – Jan 2026 • Final Year Project, University of Ibadan

Sole product owner, designer, & Frontend developer with Backend collaboration

- Identified a genuine product gap: most nutrition apps default to Western food databases with limited to no Nigerian food data. Students who tried them stopped using them within days because the tools were not built for what they actually eat.
 - Owned the full product lifecycle: user research and problem validation → UX design (Figma) → React Native frontend → AI model training and integration, with specialist backend collaboration.
 - Trained a **MobileNetV2 transfer learning model** on a custom Nigerian meal dataset across 7 food classes (Carbs, Protein, Fats & Oils, Vitamins, Minerals, Water, Snacks), achieving 67% classification accuracy, a strong baseline for a model trained from scratch on locally sourced data.
 - Snacks was a deliberate product call: returning an error for something Nigerian students genuinely consume every day would break trust. Naming and accounting for it keeps the experience honest.
 - Built a nutritionist-validated food knowledge base to ensure feedback was both culturally grounded and clinically credible, treating data quality as a product problem, not just an engineering one.
 - Delivered features: meal picture capture/upload, AI food detection & classification, Nutrition feedback report, Personalised tips for a balanced plate, Meal history, App preferences and Push notification reminders.
 - **North Star Metric:** Weekly Active Meal Analyses - users who analyse at least 3 meals per week.
-

WORK EXPERIENCE

Product Designer | Ultimate InfoTech Integrated Limited

May 2025 – Mar 2026 • Remote

- **Shipped 40+ screens across 3 products** - an RFID student attendance app, a full school management system, and a secondary school website, as one half of a 2-person design team.
- Designed a 4-role management platform (students, parents, staff, admins) with 2 integrated add-on modules (CBT and LMS), reducing scope ambiguity for engineering by delivering build-ready, annotated specifications.
- Built reusable design systems and style guides across all 3 products, cutting developer revision cycles and enabling faster, more consistent delivery.
- Presented design decisions directly to engineering teams, translating UX rationale into technical language and bridging design intent with implementation with zero loss in translation.

Product Designer (Intern) | Crop2Cash Limited

Nov 2024 – May 2025 • Ibadan, Nigeria

- Designed **CropLog**, an AgriTech mobile app for smallholder farmers, across all 5 phases of the design lifecycle: research, define, ideate, prototype, and test.
 - Conducted qualitative user research with internal sales staff to surface friction points in Sharp, an in-house B2B sales tool, translating findings into design decisions that supported a live banking partnership initiative.
 - Maintained comprehensive design documentation across Figma, FigJam, Google Docs, and Notion; building a culture of traceability that kept cross-functional teams aligned throughout fast-moving cycles.
-

EDUCATION

Bachelor of Science, Computer Science

Sep 2021 – Jan 2026

University of Ibadan • Ibadan, Nigeria

- **Relevant coursework:** Artificial Intelligence, Algorithms & Data Structures, Human-Computer Interaction, Software Engineering, Database Systems, Computer Networks.
-

SKILLS

AI Product Management: AI Product Lifecycle • User Research & Synthesis • Product Documentation • Roadmap Thinking • MVP Scoping • Agile Collaboration • AI Ethics & Responsible AI • AI Governance

Design: Figma • FigJam • Design Systems • Style Guides • Interaction Design • Usability Testing • Visual Design

Technical: React Native • Python • CNN / Transfer Learning (MobileNetV2) • SQL (Basic) • Notion • Systems Thinking • Technical Documentation

CERTIFICATIONS

- Product Management Certification - Zarttalent, Nigeria (2024)
-

LEADERSHIP & VOLUNTEERING

Vice President | Tech Girls Club, University of Ibadan

Apr 2025 – Jan 2026 • Ibadan, Nigeria

- Organised STEM bootcamps for senior secondary school girls covering product design, front-end development, and introductory AI; building a visible pipeline of young women entering tech in Ibadan.
- Represented the club at International programmes including International Girls in ICT Day, connecting with secondary school students to inspire technology careers.

Assistant Course Representative | CSC 2020/21 University of Ibadan

2021 – Jan 2026 • Ibadan, Nigeria

- Served as primary liaison between 60+ coursemates and faculty for 5 years, coordinating with lecturers and administrators to resolve student concerns, developing stakeholder communication and negotiation skills that translate directly into PM practice.
