PROFESSIONAL PROFILE

Product Designer transitioning into AI Product Management, with a Computer Science background and experience shipping AI and digital products end to end. Drove PlateLensAI, an AI-powered nutrition app for Nigerian students, from concept to a working 67% accuracy model, and shaped 40+ screens across three products in collaborative product teams. Full PlateLensAI case study on my portfolio.

FEATURED PROJECT

PlateLensAI: AI-Powered Visual Nutrition Feedback App for Nigerian University Students (Product Owner)

Product Designer - Frontend Developer

Final Year Project, University of Ibadan • Jul 2025 - Jan 2026

- Identified a market gap: existing nutrition apps failed to reflect Nigerian university students' food habits, leading to rapid abandonment. Proposed a culturally grounded AI nutrition assistant instead of a generic image classifier, a positioning decision that shaped all downstream design and modeling choices.
 - Owned the product end to end, from user research and problem validation to UX design, frontend development, and AI integration with backend collaboration.
 - Trained a MobileNetV2 transfer learning model on a custom Nigerian meal dataset across 7 food classes, reaching 67% classification accuracy as a strong baseline for a locally grounded model trained on a first generation dataset of this size.
 - Made a deliberate product call to include "Snacks" as a food class rather than returning an error for unrecognised meals, preserving user trust while clearly distinguishing snacks from the six nutrient groups that make up a balanced diet.
 - Built a nutritionist-validated food knowledge base, treating data quality as a product problem rather than a purely technical one, thereby directly improving the credibility of every piece of feedback the app generates.
 - Defined the North Star Metric as **Weekly Active Meal Analyses**, deliberately optimising for repeat use over one-time scans to track habit formation, not just trial
-

WORK EXPERIENCE

Product Designer

Ultimate InfoTech Integrated Limited (EdTech / School Systems) • Remote

May 2025 - Mar 2026

- Shipped 40+ screens across 2 products, including an RFID attendance app and school management system, cutting design-to-dev handoff time by an estimated 20–30% through build-ready, annotated specifications delivered to a 2-person design team.
- Designed a 4-role school management platform for students, parents, staff, and admins, plus CBT and LMS modules, clarifying product scope and aligning every feature to a specific user group's actual workflow.
- Identified a natural boundary between CBT and LMS while mapping role-specific flows, an insight that informed product scoping and led to the modules being defined as distinct features.

- Built reusable design systems and style guides, reducing inconsistency and rework. Rollout cut engineer clarification requests, and the platform launched across client schools.

Product Designer (Intern)

Crop2Cash Limited (AgriTech) • Ibadan, Nigeria

Nov 2024 - May 2025

- Designed CropLog, an AgriTech mobile app for Nigerian farmers to journal crop activity, measure farmland, and receive AI-generated advice, translating a broad product idea into a focused, farmer-tested workflow.
- Defined the product around three core farmer needs: farm measurement, crop journaling, and decision support; narrowing MVP scope from a longer feature list to these three highest-value farmer tasks.
- Conducted user research and competitive analysis across a sample of smallholder farmers, prioritizing feedback over internal assumptions. Insights shaped MVP priorities around the most critical workflows.
- Designed key flows across onboarding, dashboard, journals, farm measurement, and advice/insights. Built offline-friendly and multilingual support for rural usage, targeting adoption by smallholder farmers as the MVP's defined success benchmark.
- Collaborated in a 3-person design team on Sharp 2.0, an in-house app, contributing to an internal redesign built around a new partnership-driven use case.

EDUCATION

Bachelor of Science, Computer Science

University of Ibadan, Ibadan, Nigeria • Sep 2021 - Completed Jan 2026

- **Relevant coursework:** Artificial Intelligence, Algorithms & Data Structures, Human-Computer Interaction, Software Engineering, Database Systems, Computer Networks

SKILLS

Product: Product Discovery • User Research • MVP Scoping • Product Documentation • Roadmap Thinking • Trade-off Decisions • AI Product Lifecycle • Responsible AI

Design: Figma • FigJam • Design Systems • Interaction Design • Usability Testing • Visual Design • Prototyping

Technical: React Native • Python • CNNs / Transfer Learning • SQL • Systems Thinking • Technical Documentation

CERTIFICATION

- AI Governance Certification - AI Community, USA (2026)

LEADERSHIP

Vice President, Tech Girls Club, University of Ibadan

April 2025 - Jan 2026

- Co-led STEM bootcamps for senior secondary school girls on product design, front-end development, and introductory AI, helping more girls see practical tech career paths.
- Represented the club at International Girls in ICT Day and related outreach events, helping advocate for girls' participation in technology.

Assistant Course Representative, CSC 2020/21, University of Ibadan

Feb 2021 - Jan 2026

- Served as liaison between 60+ course mates and faculty, coordinating communication and helping resolve student concerns more quickly.
