PROFESSIONAL PROFILE

Product Designer transitioning into AI Product Management, with a Computer Science background and experience shipping AI and digital products end to end. Led PlateLensAI, an AI-powered nutrition app for Nigerian students, and helped ship 40+ screens across three products in collaborative product teams. See full PlateLensAI case study on my portfolio.

FEATURED PROJECT

PlateLensAI: AI-Powered Visual Nutrition Feedback App for Nigerian University Students

Sole Product Owner - Product Designer - Frontend Developer

Final Year Project, University of Ibadan • Jul 2025 - Jan 2026

- Identified a market gap: existing nutrition apps did not reflect the food habits of Nigerian university students, causing them to abandon the apps quickly; proposed a culturally grounded AI nutrition assistant for Nigerian students, not just a simple image classification tool.
 - Owned the product end to end, from user research and problem validation to UX design, frontend development, and AI integration with backend collaboration.
 - Trained a MobileNetV2 transfer learning model on a custom Nigerian meal dataset across 7 food classes, reaching 67% classification accuracy as a strong baseline for a locally grounded model.
 - Made a deliberate product decision to include “Snacks” as a food class so the app would classify them honestly rather than return an error, while clearly distinguishing them from the six nutrient groups that make up a balanced diet.
 - Built a nutritionist-validated food knowledge base to improve the cultural relevance and practical usefulness of the AI feedback.
 - Defined the North Star Metric as **Weekly Active Meal Analyses** to optimize for repeat use rather than one-time scans
-

WORK EXPERIENCE

Product Designer

Ultimate InfoTech Integrated Limited (EdTech / School Systems) • Remote

May 2025 - Mar 2026

- Shipped 40+ screens across 2 products, including an RFID attendance app and school management system, helping reduce design ambiguity and move concepts into implementation faster for a 2-person design team.
- Designed a 4-role school management platform for students, parents, staff, and admins, plus CBT and LMS modules, helping clarify product scope and align features to each user group's needs.
- Built reusable design systems and style guides across products, improving visual consistency and reducing rework during implementation.

- Collaborated directly with engineers to translate UX decisions into build-ready specifications and support smoother product delivery.

Product Designer (Intern)

Crop2Cash Limited (AgriTech) • Ibadan, Nigeria

Nov 2024 - May 2025

- Designed CropLog, an AgriTech mobile app for Nigerian farmers to journal crop activity, measure farmland, and receive AI-generated advice, helping translate a broad product idea into a focused workflow.
- Defined the product around three core user needs: farm measurement, crop journaling, and decision support, helping narrow MVP scope toward the most valuable farmer tasks.
- Conducted user research and competitive analysis to validate the concept and shape MVP priorities around the most important farming workflows.
- Designed key flows across onboarding, dashboard, journals, farm measurement, and advice/insights, with offline-friendly and multilingual considerations to better fit rural and semi-rural use cases.
- Collaborated in a 3-person design team on Sharp 2.0, an in-house app, contributing to an internal redesign built around a new partnership-driven use case.

EDUCATION

Bachelor of Science, Computer Science

University of Ibadan, Ibadan, Nigeria • Sep 2021 - Completed Jan 2026

- **Relevant coursework:** Artificial Intelligence, Algorithms & Data Structures, Human-Computer Interaction, Software Engineering, Database Systems, Computer Networks

SKILLS

Product: Product Discovery • User Research • MVP Scoping • Product Documentation • Roadmap Thinking • Trade-off Decisions • AI Product Lifecycle • Responsible AI

Design: Figma • FigJam • Design Systems • Interaction Design • Usability Testing • Visual Design • Prototyping

Technical: React Native • Python • CNNs / Transfer Learning • SQL • Systems Thinking • Technical Documentation

CERTIFICATION

- AI Governance Certification - AI Community, USA (2026)

LEADERSHIP

Vice President, Tech Girls Club, University of Ibadan

April 2025 - Jan 2026

- Co-led STEM bootcamps for senior secondary school girls on product design, front-end development, and introductory AI, helping more girls see practical tech career paths.
- Represented the club at International Girls in ICT Day and related outreach events, helping advocate for girls' participation in technology.

Assistant Course Representative, CSC 2020/21, University of Ibadan

Feb 2021 - Jan 2026

- Served as liaison between 60+ course mates and faculty, coordinating communication and helping resolve student concerns more quickly.
